

ARTIFICIAL INTELLIGENCE. BUILDING EFFICIENT MODELS FOR LEGAL SERVICE IN THE AGE OF DIGITAL DISRUPTION

Posted on 17 April 2017

Category: [Analysis](#)

15' highlights from a 1h webinar.

As lawyers consider ways of becoming more efficient, they are developing new processes and operational systems in response to the challenges of increasingly competitive fees. As part of the LMP programme, join Andy Daws, CCO Kim Technologies and VP North America Riverview Law and Mari Cruz Taboada, LMP Academic Coordinator & Managing Director at Iberian Legal Group, to discuss how lawyers can make this transition.

Kim Technologies' innovative Knowledge Automation platform is an example of a new generation of technologies that enable lawyers to automate in a few hours what might previously have taken a team of developers weeks or months to achieve. This tool is particularly relevant in a legal & compliance context.
